Wood Bioenergy US

Forisk Research Quarterly
Q2 2019

A publication by Forisk Consulting that tracks, screens, and analyzes the wood bioenergy sector in the United States.

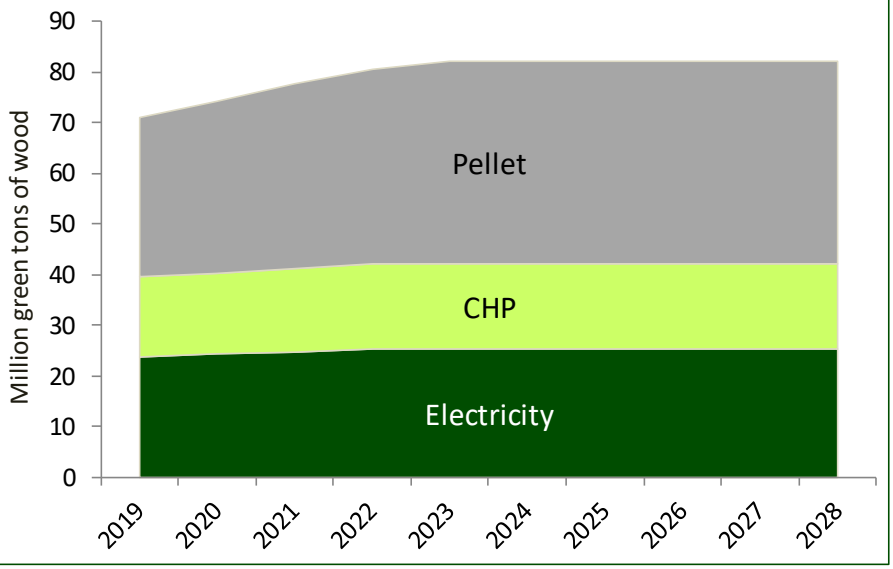
Free Summary

Number and Wood Use of Announced and Operating Projects, 2028

Region	Number of Projects by Type: Electricity	CHP	Thermal	Liquid Fuel	Pellet	Other	Total	*Total that pass screens*	Wood Use of All Projects gtons	Wood Use of Projects that Pass Screens gtons
North	44	26	8	15	77	0	170	*119*	25,370,316	23,045,216
South	23	20	9	16	76	3	147	*88*	64,719,829	46,526,080
West	36	19	2	5	45	1	108	*70*	16,077,726	12,967,576
Total	103	65	19	36	198	4	425	*277*	106,167,870	82,538,871

- **As of April 19, 2019, there were 425 projects in Forisk's *Wood Bioenergy US* database.** All announced and operating projects could use a total of 106.2 million green tons of wood per year by 2028. Projects that pass viability screens could consume 82.5 million tons of wood per year.
- Of the 147 projects announced and operating in the South, 88 pass viability screens. In the West, 70 of the 108 announced and operating projects pass viability screens. In the North, 119 of the 170 announced and operating wood bioenergy projects pass Forisk's viability screens.
- Regionally, the U.S. North still has the largest share (43%) of viable wood bioenergy projects while the South accounts for 56% of the potential wood use for bioenergy.

Estimated Wood Use by Announced Facilities that Pass Screens



Notes

- Estimated demand is wood use by all projects that pass the technology and status screens.
- Technology: if the technology is viable today, then the project passes the technology screen. Pelletizing technology and electricity are currently proven technologies that pass this screen. Torrefied biomass technology does not pass the technology screen. Cellulosic ethanol from wood feedstock is still a developing technology and is currently not operational.
- Status: if the project has received/secured/signed two or more of the following then it passes the status screen: financing, air quality permits, Engineering Procurement and Construction contracts, off-take agreements, interconnection agreements for electricity facilities, and supply agreements.
- CHP is combined heat and power, or cogeneration. Thermal volumes are less than 1% of total volume in 2028.
- Assume 100% wood use unless feedstock mix is specified.
- If a project does not announce a startup date, then Forisk estimates the start date.
